Containing scientific abstracts of important and interesting works, published in English; a general account of such as are of less consequence, with short characters; notices, or reviews of valuable foreign

books; criticisms on new pieces of music and works of art; and the literary intelligence of Europe, &c. Provocative, challenging, and fun, *The Ideal Problem Solver* offers a sound, methodical approach for resolving problems based on the IDEAL (Identify, Define, Explore, Act, Look) model. The authors suggest new strategies for enhancing creativity, improving memory, criticizing ideas and generating alternatives, and communicating more effectively with a wider range of people. Using the results of laboratory research previously available only in a piece-meal fashion or in scientific journals, Bransford and Stein discuss such issues as Teaming new information, overcoming blocks to creativity, and viewing problems from a variety of perspectives. The meeting on experimental hepatocarcinogenesis which took place in Spa, Belgium at the end of May 1987 was the Second European Meeting. About 100 scientists, mostly from Europe but also from the United States, met there for three days in a very friendly atmosphere to exchange knowledge and ideas on experimental and human liver carcinogenesis. The main topics discussed during the meeting included general reviews on hepatocarcinogenesis, experimental models of hepa tocarcinogenesis, biology of hepatocarcinogenesis, and in vitro studies in hepatocarcinogenesis. They are all covered by the various chapters of this proceedings volume, which reflects the present state of knowledge in this important field of cancer research. The final aim of that research is to understand the basic mechanisms of carcinogenesis. The liver offers a parti cularly interesting tool to reach such a goal. Indeed, its biochemistry, its morphology, and its physiology are very diverse, but relatively well known. Various protocols have been developed to produce

hepatocellular carcinomas or other malignant tumors. Their appearance is most often preceded by phenotypically altered foci and nodules which have been isolated and characterized. The major cell populations of normal, neoplastic, and malignant livers have been cultivated. The "Gentleman's magazine" section is a digest of selections from the weekly press; the "(Trader's) monthly intelligencer" section consists of news (foreign and domestic), vital statistics, a register of the month's new publications, and a calendar of forthcoming trade fairs. Originally published at the height of the Watergate crisis, Charles Black's classic *Impeachment: A Handbook* has long been the premier guide to the subject of presidential impeachment. Now thoroughly updated with new chapters by Philip Bobbitt, it remains essential reading for every concerned citizen. Praise for *Impeachment*: "To understand impeachment, read this book. It shows how the rule of law limits power, even of the most powerful, and reminds us that the impact of the law on our lives ultimately depends on the conscience of the individual American."--Bill Bradley, former United States senator "The most important book ever written on presidential impeachment."--*Lawfare* "A model of how so serious an act of state should be approached."--*Wall Street Journal* "A citizen's guide to impeachment. . . . Elegantly written, lucid, intelligent, and comprehensive."--*New York Times Book Review* "The finest text on the subject I have ever read."--Ben

Wittes The volume contains 23 articles by international experts, both scholars and practitioners dealing with the development of institutional investors (such as banks, insurances, investment companies, pension funds etc.), their investment and voting policies, the impact on managements of the companies concerned and related issues. The consequences of the international development on capital markets as well as policy implications for the respective national legislations are treated. This book offers an analytical review of the state of knowledge on elderly sexual abuse and presents new data that will confront some of the accepted ideas and some of the myths associated with this specific form of sexual violence. Sexual violence research has often considered children to be the most vulnerable population. However, another population just as vulnerable to sexual abuse but often overlooked by researchers, is the elderly. Evidence shows that elderly victims are more likely to be attacked by strangers, most likely to be victimized in their own homes, and are usually less capable of resisting a physical attack. Drawing on a large and representative dataset, *Elderly Sexual Abuse* offers a full and theoretically informed picture of the offenders and their crimes. In addition to a specific chapter devoted to prevention and criminal investigation, the book also connects research to practice, exploring what the findings mean for professionals working with these cases and the criminal justice system. This book is essential reading

for all those engaged with sexual violence, victimization, elder abuse, and vulnerable populations. One of the most serious consequences of global climate change for coral reefs is the increased frequency and severity of mass coral bleaching events and, since the first edition of this volume was published in 2009, there have been additional mass coral bleaching events. This book provides comprehensive information on the causes and consequences of coral bleaching for coral reef ecosystems, from the genes and microbes involved in the bleaching response, to individual coral colonies and whole reef systems. It presents detailed analyses of how coral bleaching can be detected and quantified and reviews future scenarios based on modeling efforts and the potential mechanisms of acclimatisation and adaptation. It also briefly discusses emerging research areas that focus on the development of innovative interventions aiming to increase coral climate resilience and restore reefs.
